Dear Customer,

Re: European Regulations (EC) No1907/2006 REACH Regulations
ECHA publishes candidate list of Substances for Authorisation.

The European Chemicals Agency (ECHA) guidelines http://www.echa.europa.eu/home_en.esp make it clear that only substances intended to be released from articles during normal operation are required to be registered under REACH. There are no substances within our products that are intended to be released during normal use.

According to all our current data at our disposal, the products or parts of products etc supplied by LCR contain no substances at a level > 0.1 wt%, the manufacturing, putting on the market or use of which is restricted pursuant to the provisions of the REACH Regulations.

According to the REACH Regulation, LCR are a downstream user. The goods delivered by us to your company are outside the scope of Registration, to monitor our own compliance; we have contacted our suppliers to confirm their understanding and obligation regarding REACH and pre-registration.

LCR has compiled information from our suppliers concerning the SVHC list and to their obligation.

All our suppliers are aware of the obligations and all have proffered information in the positive.

The information is updated on a regular basis.

We do not expect any impact on the availability of products we supply due to the REACH compliance.

None of our products we supply contain any substances of very high concern.

Our suppliers and those further up the supply chain will pre-register/register according to the REACH requirements and have or intend doing before the pre-registration deadline should it be necessary.

Best regards

Kim Powell
